

Boost Your Home's Value

In addition to saving money on your monthly electric bill, adding solar to your home can increase its value. According to a 2019 Zillow study, **homes with solar sell for an average of 4.1% more** than homes without solar.¹ On a \$500,000 home that could mean an additional \$20,500 of value from solar alone.

Reduce your time to savings

When you take into account the possibility of added home value—plus any applicable incentives²—solar can quickly pay for itself.

Increase appeal to buyers

More than 80% of homebuyers say energy-efficiency features (such as solar) are important to them.¹
